EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. William Solomon on 1/29/10.

The application has been amended as follows:

In the claims:

a) please change the phrase "unit fuel cell" to "membrane electrode assembly" in line 11 of claim 47 and line 7 of claim 48;

2. The following is an examiner's statement of reasons for allowance:

The Kawazu reference discloses a fuel cell assembly comprising: a humidifier "200" and a plurality of fuel cell units "10", wherein each of the fuel cell units comprises an electrolyte membrane "11", a cathode "12" adjacent to one face of the membrane, an anode "13" adjacent to the other face of the membrane, a gas diffusion layer adjacent to the cathode, a gas diffusion layer adjacent to the anode, a separator "14" having a flow channel for flowing oxidizing gas, which is adjacent to the cathode, and a separator "15" having a flow channel for flowing fuel gas, which is adjacent to the anode, wherein the humidifier comprises a porous membrane "602" (porous water-retaining layer) for retaining water supplied thereto, wherein the porous membrane "602"

Art Unit: 1795

communicates with a channel containing water (not labeled) by way of a porous carbon (filter) "610" for passing water, but not gas, the channel containing water exclusively supplying water to the porous membrane, supplying water thereto via the filter, wherein the porous carbon (filter) is disposed at a position where the cooling water inlet and the porous membrane communicate with each other, and wherein the humidifier adjoins an end of the plurality of the fuel cell units in such as relation that the porous membrane faces the flow channels thereby to transfer water introduced into the porous membrane to the fuel gas and oxidizing gas flowing in the flow channels, the flow channels for flowing gases being partitioned with a wall "612", "608", "614" from the channel containing water (See paragraphs [0031],[0033], [0034],[0036],[0040], and Drawings 1, 3, and 5).

Regarding independent claims 33 and 52, Kawazu does not expressly teach a holder for the water retaining layer, wherein a surface of the holder for the water retaining layer and an adjacent surface of the water retaining layer are in contact over entire surfaces thereof.

Regarding independent claim 47, Kawazu does not expressly teach a humidifier holding member for holding peripheries of the water retaining layer, water permeable layer, and unit fuel cell.

Regarding independent claim 48, Kawazu does not expressly teach a humidifier holding member for holding peripheries of the water retaining layer and unit fuel cell.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should

Art Unit: 1795

preferably accompany the issue fee. Such submissions should be clearly labeled

"Comments on Statement of Reasons for Allowance."
